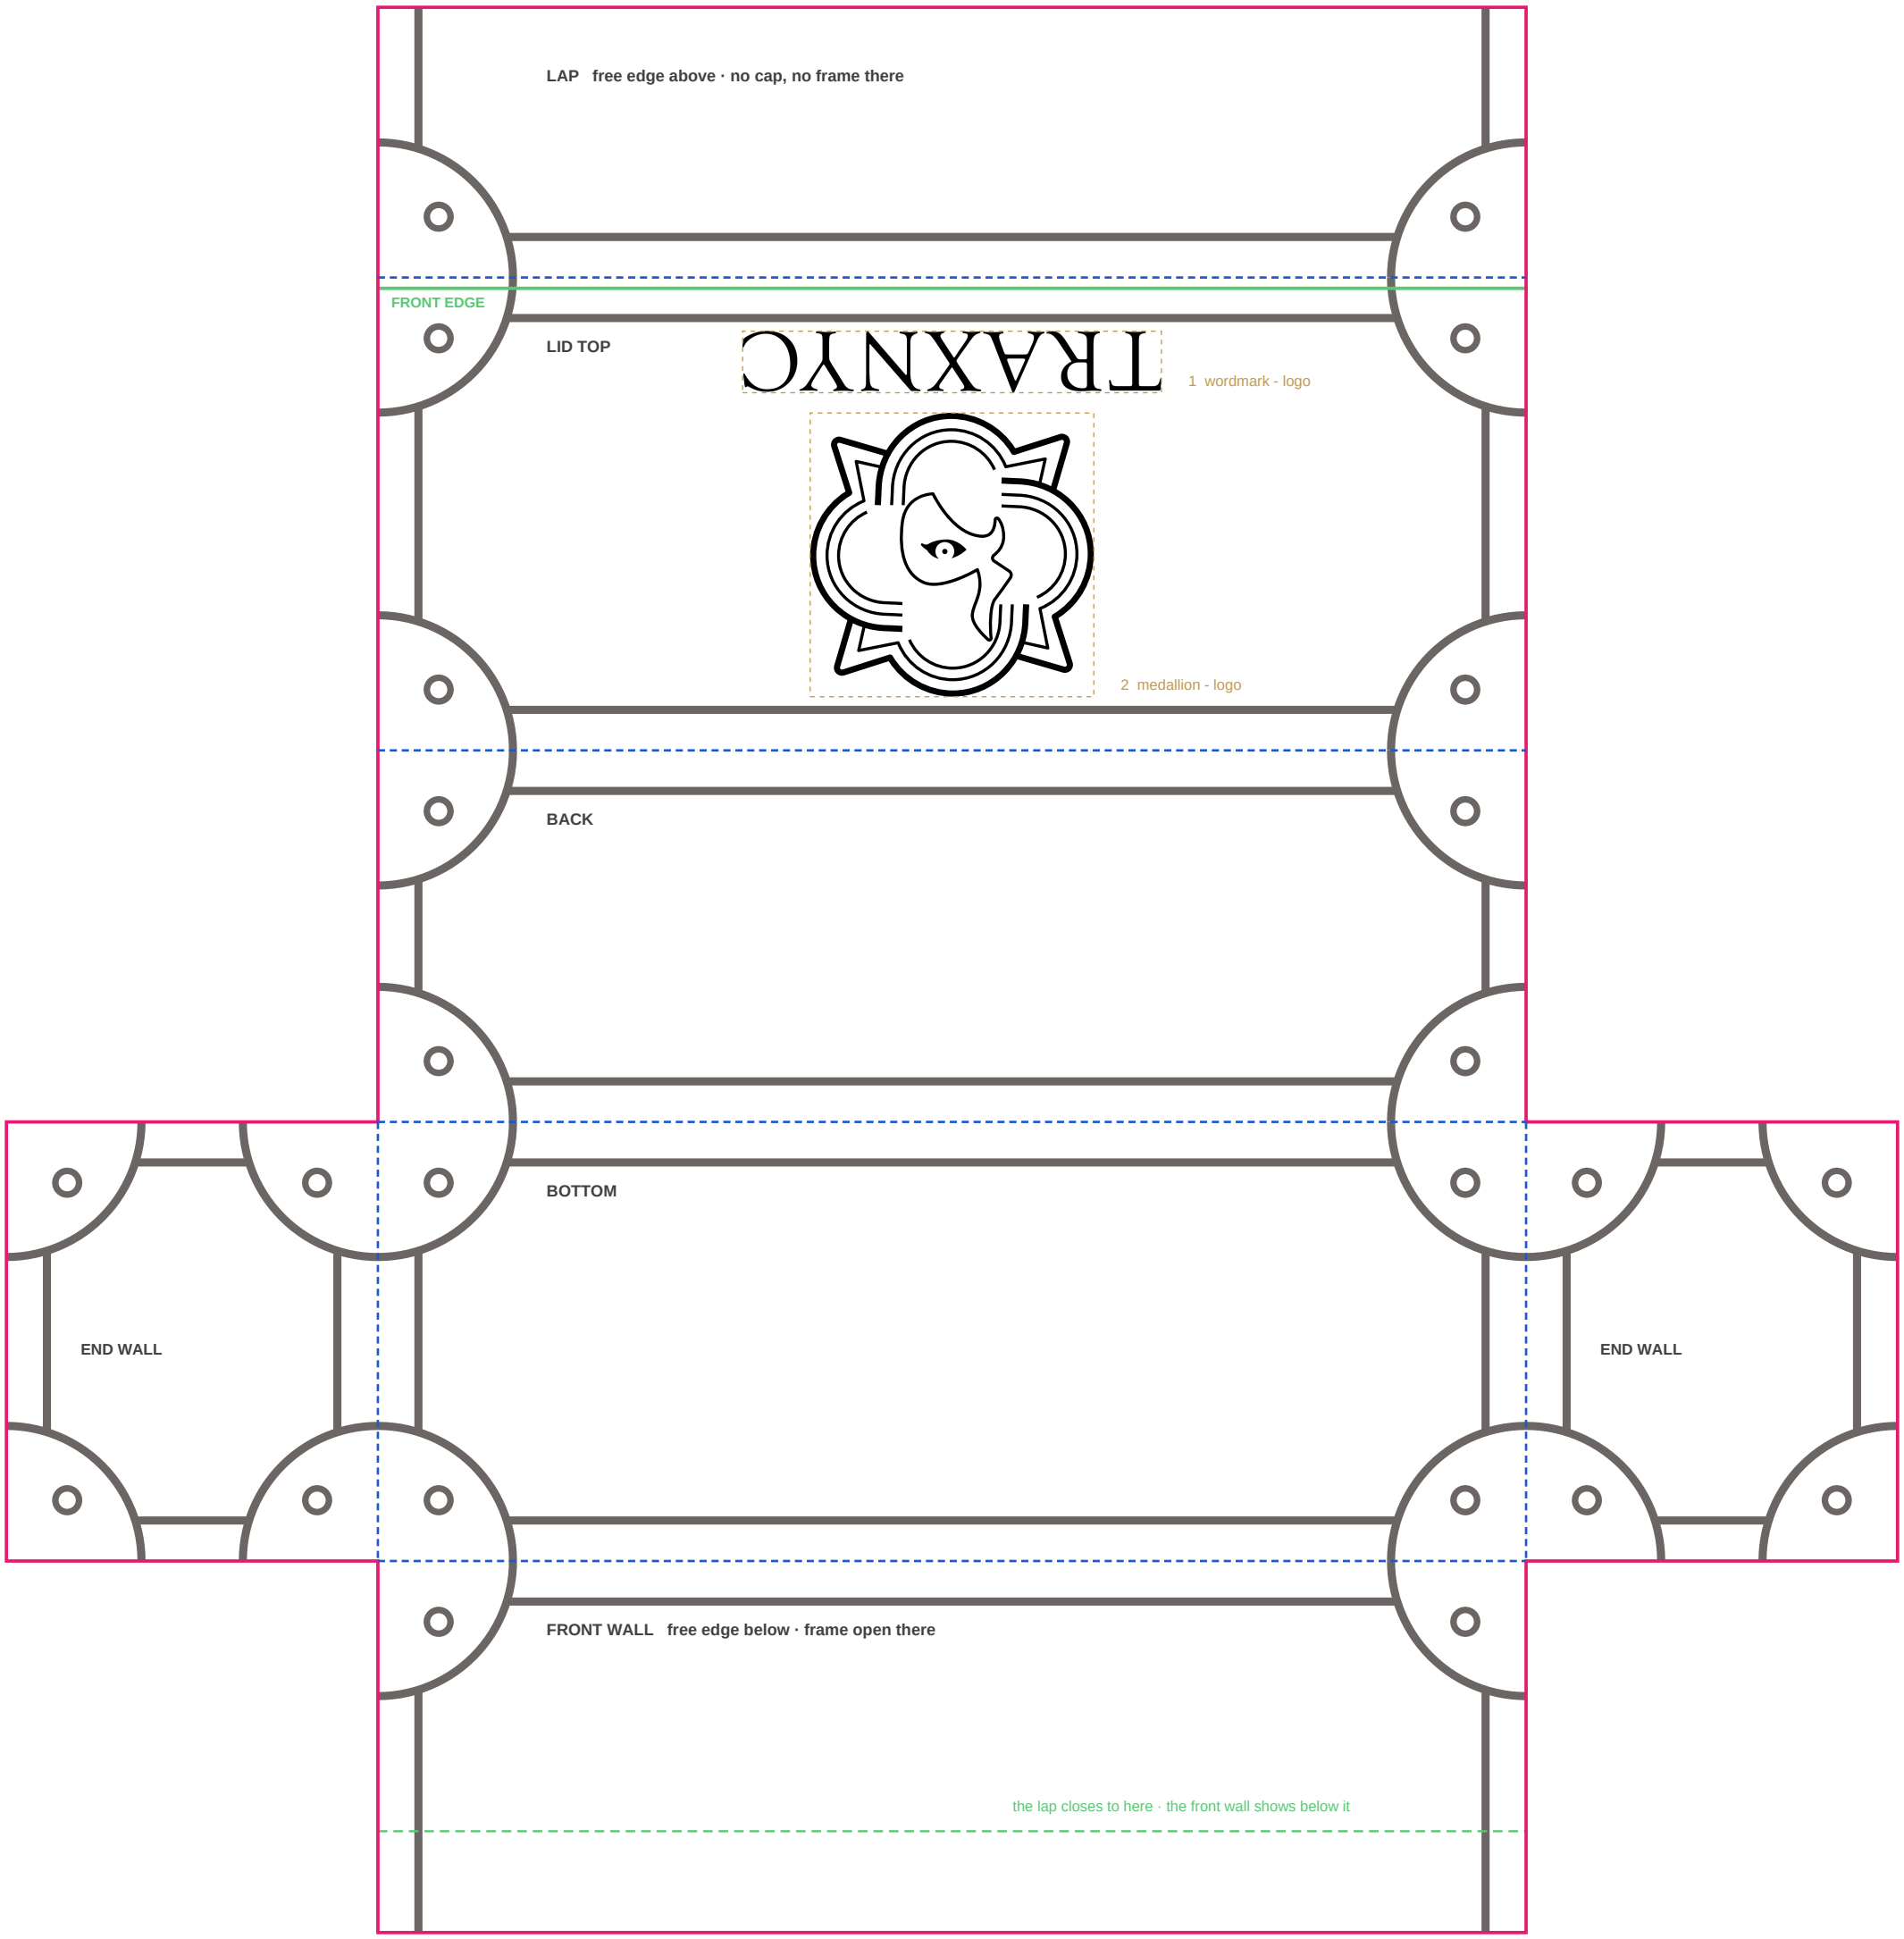
TRAXNYC trunk box · artwork, opened out

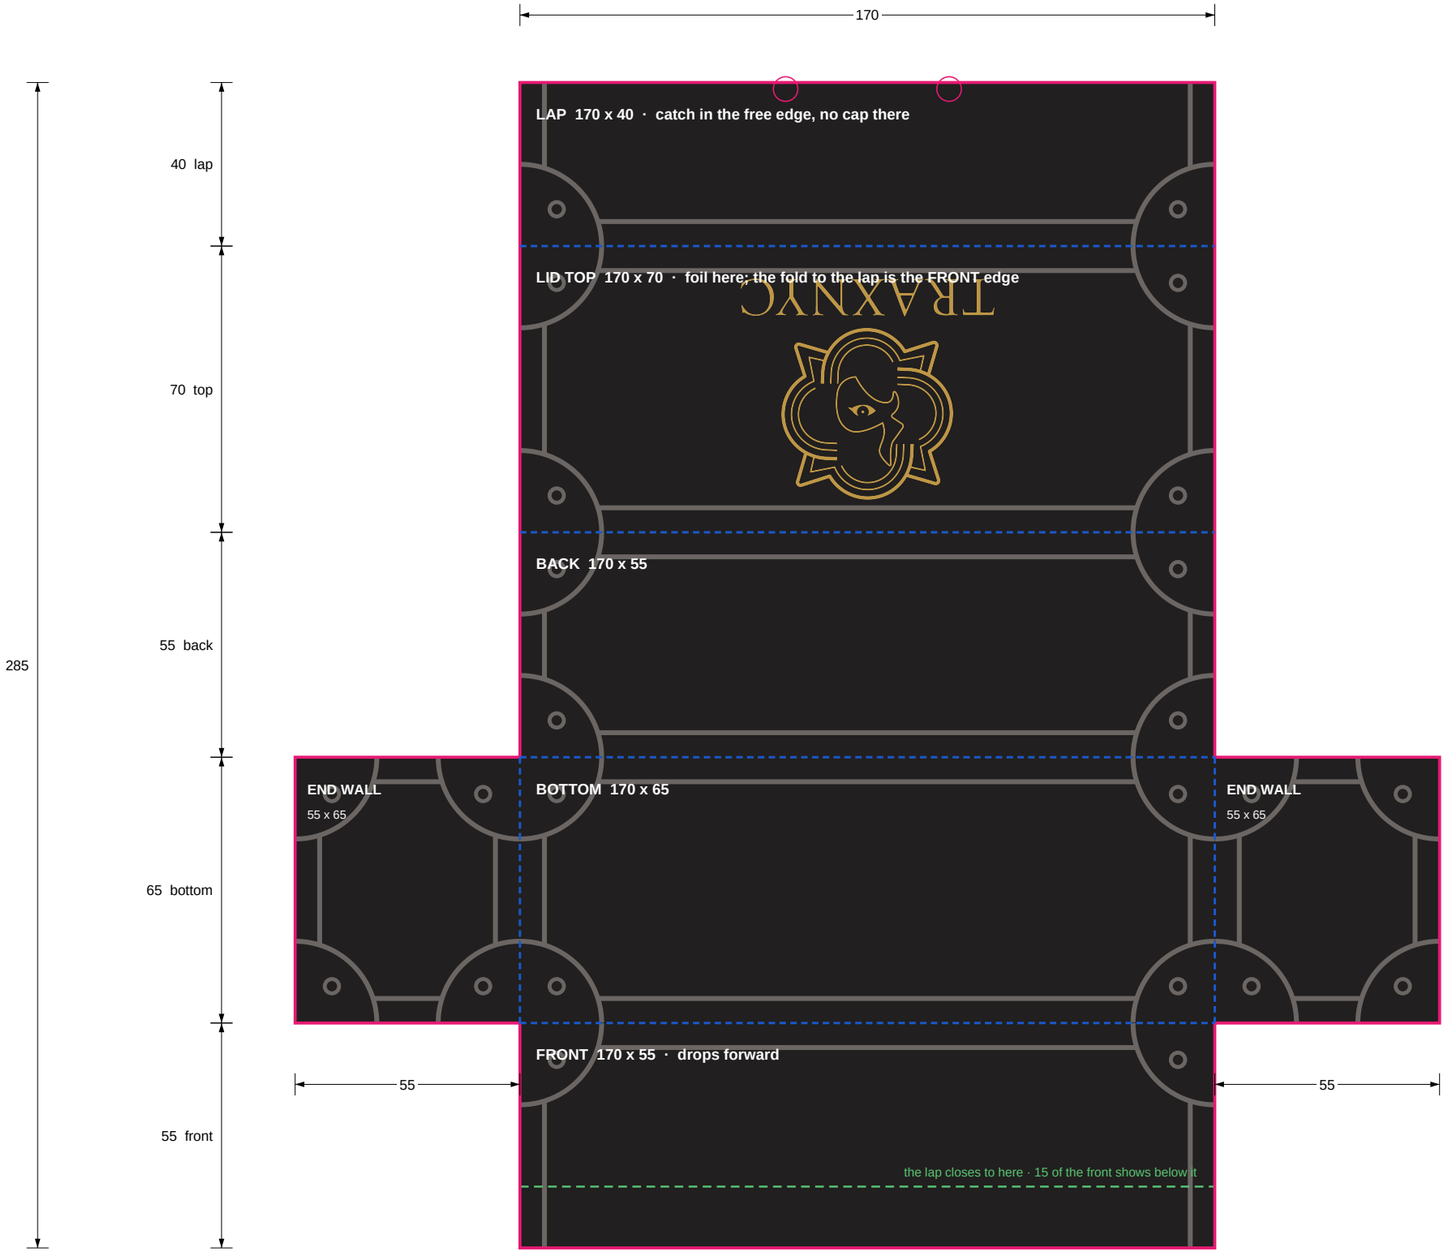
one piece · sizes and tolerances on the production sheets

cut · fold · blind deboss, cap, stud · hot foil · where the lap closes



TRAXNYC trunk box · how the finished piece reads

the same artwork on black leatherette, gold foil and blind deboss · visual reference, not the production file



One piece. Lap down over the front, top over from the back, back and front up off the bottom, end walls up off the bottom row. The end walls butt the back and the front; no glue tab.

Every corner cap sits on a fold, because it wraps a real edge · eight corners, both ends of each of the four long folds.

The lap has no cap on its free edge and the front wall none on its top edge; those two meet each other, not a board edge. Neither frame closes there either: the side lines run straight out to the free edge, so the shut box shows one frame down the whole front.

Allow 15 turn-in on every raw edge, not drawn. Board 2.

Blind deboss 6 in from each panel edge, 1.2 wide, each run stopping 19.1 from the corner where the cap arc meets it.
