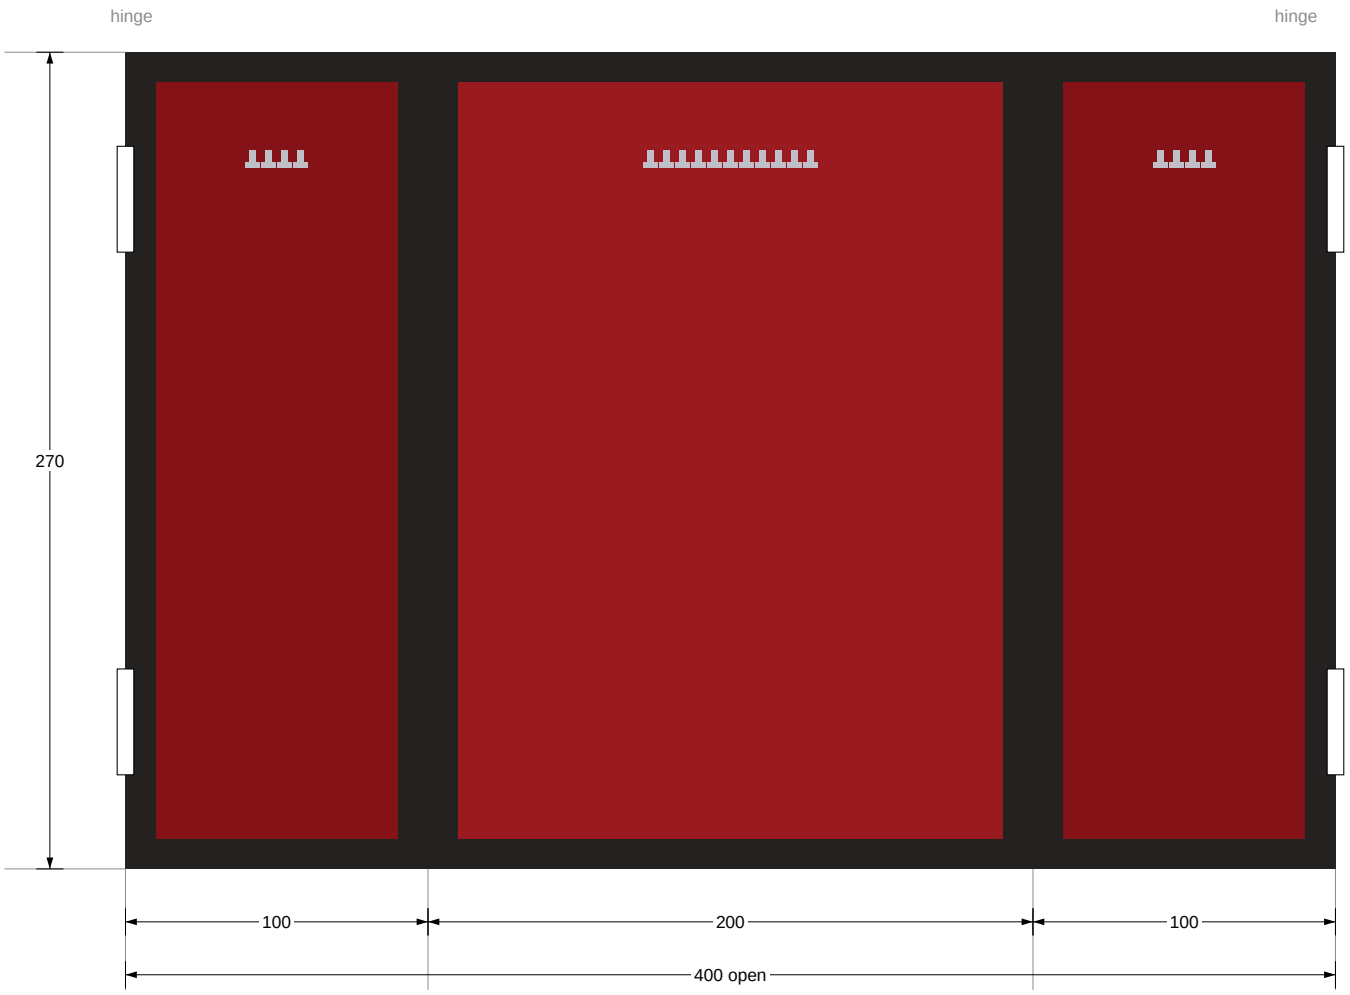
Presentation case · open

two doors out flat; 200 x 270 x 60 mm closed. drawing at 1:2.5



lined fields
doors 80 x 250
tray floor 180 x 250

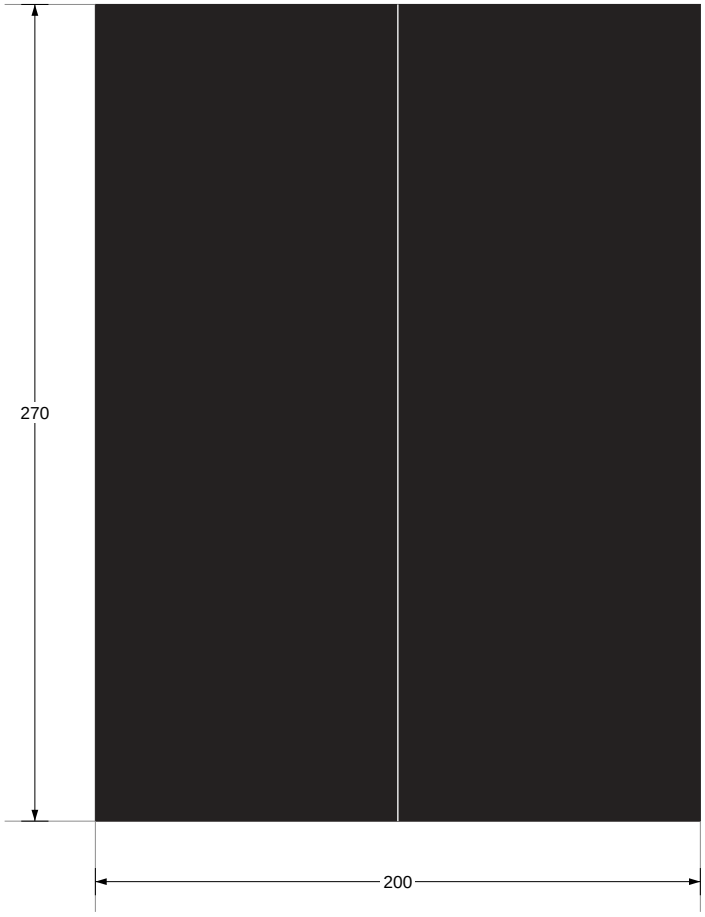
hooks
15 centres, 25 below the top of each field
4 per door, 11 in the tray
19 in all

why the doors are narrow
they have to meet on the centre line when shut, so each is half the closed width. a wing as wide as the tray, which is how the photograph reads, cannot shut beside its partner at all -- it has to fold over it, and the depth is then spent three times, not twice: 24 + 18 + 18 instead of 42 + 18.

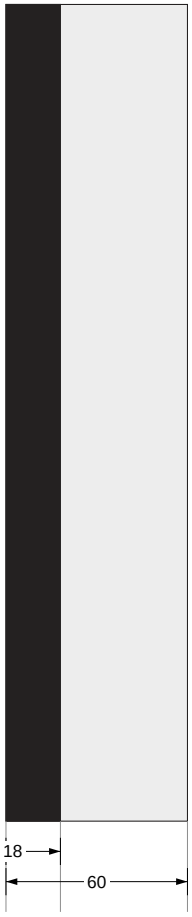
Presentation case · closed

front, side and a section through the middle. drawing at 1:2.5

front · the doors meet here



side



section, looking down

the doors shut side by side, not stacked, so the 60 depth carries one door thickness and the tray: 18 + 42.
walls 10, base 6; cavity 180 x 250 x 36 clear for the chains to hang in.
door recess 8 deep inside a 10 rim, so a hook and its chain clear the tray rim when it shuts.

Presentation case · cutting list

sizes over the carcass, before lining

part	no.	length	width	thick	note
tray, back	1	180	250	6	let into the walls
tray, long wall	2	270	42	10	full height of the case
tray, short wall	2	180	42	10	between the long walls
door panel	2	100	270	18	8 recess, 10 rim
lining, tray floor	1	180	250		velvet over 1 mm card
lining, tray wall	4		36		cut to suit on fitting
lining, door field	2	80	250		velvet over 1 mm card
hinge, 40 mm butt	4				two per door, inset in the outer edge
hook	19				4 per door, 11 in the tray, 15 centres
catch, magnetic	2				on the meeting edges

hook spacing in the tray, full size

hooks sit 25 below the top of the lined field on every face.
set them out from the centre line so the row stays centred whatever the count.
