TRAXNYC trunk box · general arrangement

closed 170 x 70 x 60 mm · scale 1:2 · exterior only · all dimensions mm

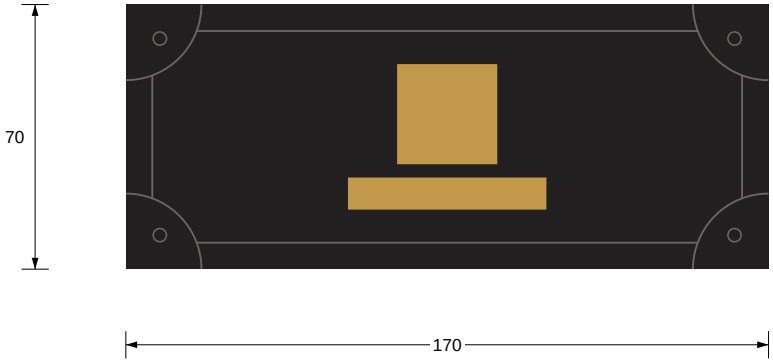

front · the lap drops forward off the plinth line

end · skirt over plinth

lid top · foil and caps

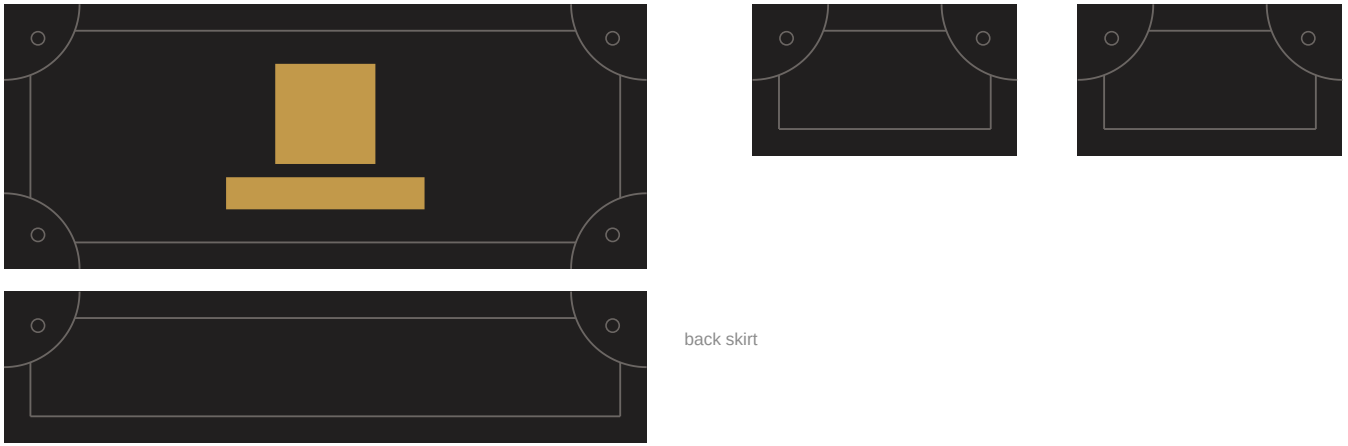

The lap carries no corner cap.
The caps you see beside it when the box is shut belong to the lid above and the plinth below. Cap reach 20; the plinth is 15, so a lower cap finishes exactly on the plinth line and nothing crosses the opening.

Magnetic catch: pair at 40 centres, set behind the lap's free edge, catching the lid.

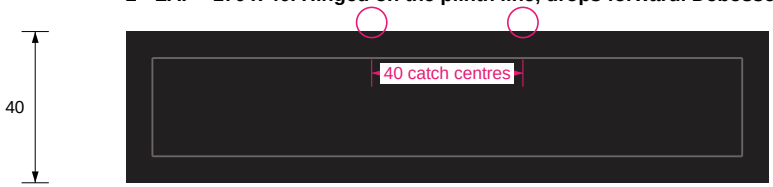

TRAXNYC trunk box · how it opens

the three parts drawn apart · scale 1:2

1 · LID · top 170 x 70 plus a 40 skirt on the back and both ends. Hinged at the back. Four top caps, and the foil.

2 · LAP · 170 x 40. Hinged on the plinth line, drops forward. Debossed line only: NO caps, NO studs.

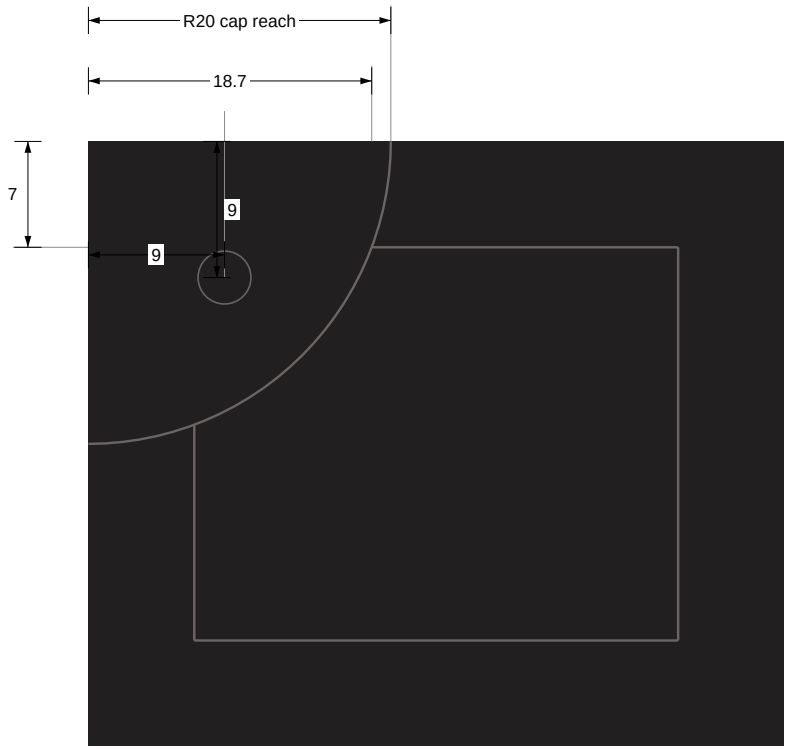

3 · PLINTH · a 15 band all the way round, 170 + 70 + 170 + 70. Fixed. Four bottom caps, no debossed line (the band is too shallow).

Corner detail

scale 2:1 · the debossed line stops where the cap arc crosses it

Cap: a quarter-round struck from the corner, worked in the wrap.
Radius 20. Domed stud 3.5 dia, centre 9 in from both edges.
Debossed line 7 in from the edge, 0.7 wide, blind · no colour.
The straight run ends at sqrt(20^2 - 7^2) = 18.7 from the corner,
where the arc crosses it. The two marks meet; neither crosses.

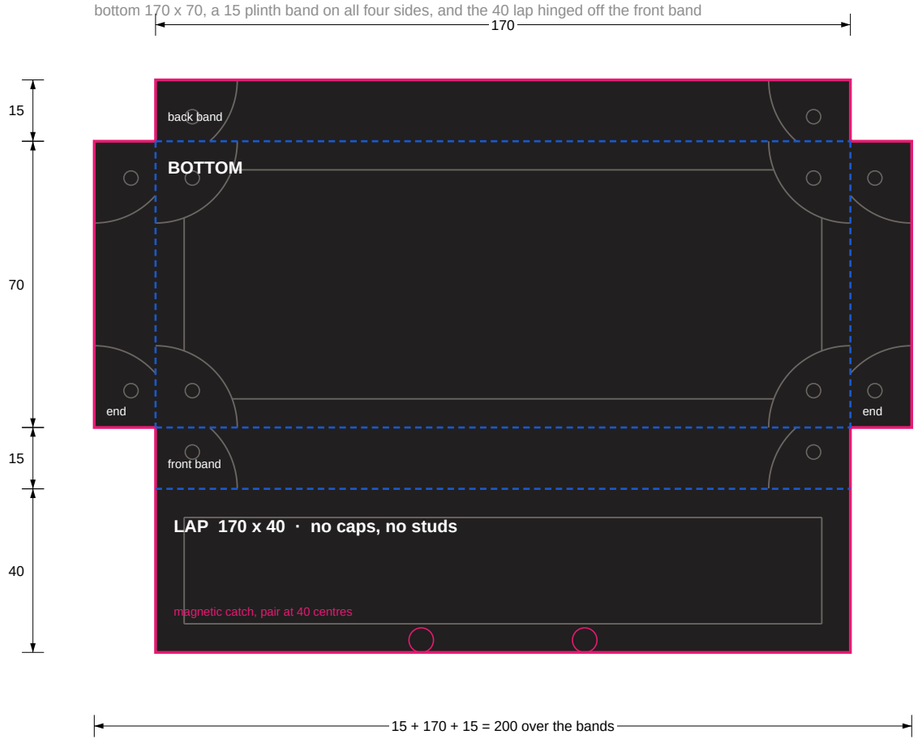

The cap is NOT drawn round into the field, and it is NOT drawn on the lap. Faces that carry caps: lid top (4), lid back and both end skirts (top 2 each), plinth band (bottom 2 each run), bottom (4).

TRAXNYC trunk box · printing and tooling, laid flat

closed 170 x 70 x 60 · scale 1:1.5 · magenta = outer silhouette (cut) · blue dashed = fold · grey = blind deboss · gold = foil

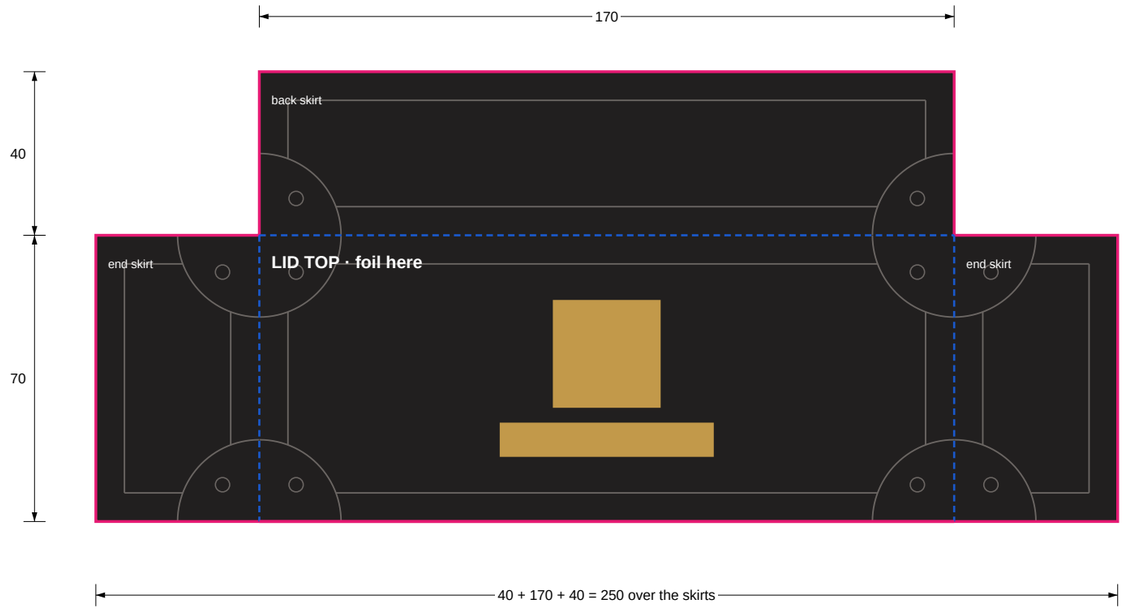

A · BASE · fixed

bottom 170 x 70, a 15 plinth band on all four sides, and the 40 lap hinged off the front band

B · LID · hinged at the back

top 170 x 70 with a 40 skirt on the back and both ends; the front edge is the 5 roll only, because the lap closes against it

A and B are separate pieces. B hinges to A along the back of the plinth; the lap hinges to A along the front of the plinth.

Every corner cap sits against a fold, because a cap wraps a real edge of the finished box · four on the bottom, four on the top.

The lap is the only large panel with no cap and no stud. The caps a shut box shows beside it belong to the lid above and the plinth below.

Allow 15 turn-in on every raw edge, not drawn. Board 2.

Blind deboss: 7 in from each panel edge, 0.7 wide, each run stopping 18.7 from the corner where the cap arc meets it.
